

Capstone Project Documentation

Project Title

End-to-End Automation Testing of The Souled Store Website Using Playwright with JavaScript

Objective

The objective of this project is to design and develop an automated testing framework for The Souled Store e-commerce website using the Playwright automation tool with JavaScript. This project aims to automate major user workflows of the application to improve testing efficiency, reduce manual effort, and ensure application quality across different browsers and devices. The framework will follow industry-standard automation practices such as Page Object Model (POM), reusable components, reporting, and cross-browser execution.

Modules Covered

1. Homepage Testing
2. Search Functionality
3. Product Listing Page (PLP)
4. Product Details Page (PDP)
5. Cart Module
6. Login Module
7. Wishlist Module
8. Checkout Flow
9. Responsive Testing
10. Cross-Browser Testing

Approximately 120 test cases will be designed and automated across these modules.

Technologies Used

Technology	Purpose
JavaScript	Programming Language
Playwright	Automation Testing Framework
Node.js	Runtime Environment
Visual Studio Code	Development IDE
Git & GitHub	Version Control
HTML/Allure Reports	Test Reporting
GitHub Actions	CI/CD Integration

Conclusion

This project will help in understanding real-world web automation testing using Playwright and JavaScript. By automating critical functionalities of The Souled Store website, the framework will ensure faster execution, improved accuracy, and better test coverage. The project also provides hands-on experience with modern automation concepts such as Page Object Model, reusable automation framework design, cross-browser testing, reporting, and CI/CD integration, making it suitable for industry-level automation testing practices.
